This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1-10. (canceled)

11. (currently amended) Output device for a container (6) which comprises a bottom and a surrounding wall and a discharge opening, comprising a hub (1) and at least two arms (3) fixed to the hub (1), wherein,

each arm (3) is designed with

- i) at least one outer section designed and arranged to at use being capable of essentially preventing material from being brought towards the wall of the container (6), and
- ii) at least one inner section connected to the outer section, designed and arranged to at use being capable of bringing the material essentially in the direction of feed for the device, the direction of feed being the direction in which the device brings the material towards the discharge opening,

the at least two arms (3) present essentially concave surfaces facing the direction of feed, and extend to the wall of the container (6), and

the bottom of the container has at least one gap-shaped discharge opening (5) extending from the inner wall of the container radially to the hub (1), ~~and~~

a frame (2) is arranged adjacent to the outer ends of the arms (3), the frame being fixed to the container (6),

wherein the arms (3) are designed with a wedge-shaped cross section, where the wedge-shape tapers contrary to the direction of feed.

12. (previously presented) Output device according to claim 11, wherein each arm (3) is continuously bent.

13-16. (cancelled)

17. (previously presented) Output device according to claim 11, further comprising a driving device capable of driving the arms with a rotating movement.

18. (previously presented) Output device according to claim 11, further comprising a driving device capable of driving the arms with a reciprocating movement.

19. (previously presented) Output device according to claim 12, further comprising a driving device capable of driving the arms with a reciprocating movement.

20-27. (cancelled).
